VueturaTrac™

Other Key Modules for Operations & Management

While VueturaTrac has a large variety of solutions, below are some additional key solutions available to our customers:

Packing List Digital Storage and Tracking (Standard Feature) Do away with the cost and problems associated with the hard-copy vendor's "Packing Lists". Using a digital scanner you scan the vendor's packing list, it automatically saves it in the VueturaTrac DB attached to the transaction, available to review or print from the intranet (by authorized users) from the VueturaTrac WebTrac™ browser.

Delivery Document Web Rendering (Optional) Present users with receipt documents as they view parcel history and status from WebTrac. This solution provides significant benefits to purchasing department personnel by providing update status on purchase order receipts and return authorizations, accounts payable for validation of receipts and/or research for invoice discrepancies, auditing, and other internal auditing uses.

Exception Reporting (Optional) Exceptions related to purchase order receipts (shortages, overages, incorrect items, etc.) are captured and recorded and reported to buyers and management. With email of the receipt confirmation, a notification to the buyer is created, vendor score card reporting, and a buyer web tool for updating status of exceptions, this tool improves the overall process flow in an often tedious and labor intensive process in most supply chain operations.

EDI Integration - ASN/856 (Optional) The VueturaTrac Framework is setting the stage in healthcare for a standardized data set, automation process flow, and highly efficient receipt transaction method that has been created, implemented, and proven in the retail market over the past 20 years. While healthcare suppliers have not moved in this direction, it's our goal to prepare them to handle this new standard in electronic commerce.

Vuetura

Advanced tracking. **Powerful results.**

Features:	Benefits:
Scans express package label barcodes	Reduces data entry time, improves accuracy by eliminating data entry errors.
Packages routed using employee identifiers	Flexible addressing to match your organization's needs and processes.
Track packages in real-time	Increases customer service, accountability, security, and minimizes fraud.
MyVue & WebTrac Interface	Eliminates customer service calls to the receiving department. Allows employees to search for and track their own packages from their desktop.
Automatic E-mail & Text Notification	Recipient is aware of when their package will be delivered; this will reduce calls to customer service.
Integration with employee databases to route packages	Reduces data entry time and increases accuracy.
Watches and Security Alerts	Improves security by alerting processors of special handling, refusal, or any desired action.
Reports	View and print a limitless number of reports. These can be exported to excel, or viewed as color graphs and charts.
Scalability	Grows with your organization from processing dozens of packages a day to thousands.

Powerful results

VueturaTrac gives you complete control and detailed oversight of visitor and package tracking, process automation, and supply chain management.

What makes VueturaTrac so great?

⏀ Speed and Efficiency

With VueturaTrac manual processes become automated, streamlined, accurate, faster and much, much less costly.

👍 100% Visibility

With just a few clicks, you can find any package (and person?) in your facility and access its complete history.

📈 Rapid ROI

Customers report 400% or more three-year ROI, and the system frequently pays for itself in under a year.

⚙ It seamlessly integrates with the big systems

VueturaTrac can integrate between one or more external host database systems or data warehouses.

About Vuetura

We are tracking experts with an intelligent, user-friendly framework built to give you complete control and detailed oversight of all tangible items within your organization— receiving & delivery tracking, lobby and visitor security, supply chain management and more.
