

VueturaTrac™ Rich Client Software

Unique to VueturaTrac Rich Client (RC) is the flexibility and mobility of the interfaces and the optimized utilization of the databases. The VueturaTrac Framework Server provides this capability which allows cross utilization of remote data sources (employee feeds, locator data and other organization data) by virtualizing the external data.

What this means is efficiency. From one VueturaTrac RC application, utilizing the connections from the server can quickly be configured for tracking and managing tangible items of any type; parcels, boxes, assets, and people. Everything that or moves within a defined organization or site and record the movement of each step as the movement.

Common features of the VueturaTrac RC application are maximized for Visitor Management and Receiving Man-

agement. Users may quickly select the Visitor or Receiving Interface Buttons and switch from Parcel Receiving to Visitor Management. Each interface has unique fields and processes, but share many common data and functions. This virtualization of data is key to the flexibility, seamless integration and rapid deployment of additional VueturaTrac RC applications when you need them up and running quickly.

VueturaTrac™ Receiving Management Solution Key Features

The Vuetura RC application has the most advanced method of receiving and routing of parcels in the industry. It automatically calculates carrier information and minimizes data entry. Tasks are easily performed in this state-of-the-art, Windows™, application. VueturaTrac gives mailroom and receiving staff a quick and easy way to log packages, locate employees and ensure parcel accountability. Hand-held computers extend the operations to the point-of-delivery to record digital signatures fast, easy, and affordably.

License Plate:

- Each carton is provided a unique barcode for 100% accountability and visibility, ensuring the chain of custody is always intact.
- Easily configured to show key routing detail, ensures quick and accurate routing and delivery.

Carrier Barcode Parsing Engine:

- Automatically identifies, tracking number, carrier, service level, and sender information.
- Allows for auto-link to desired delivery service levels within your organization.

Multi-box Shipments:

- One click shipment creation allows user to minimize key strokes while creating unique records for their shipments.
- Each License Plate shows a unique ID, with the specific box number within the shipment (ie: 1 of 3; 2 of 3; 3 of 3).

Alias Drop Down:

- Allows for quick routing for packages that arrive with a specific Department Name or Addressee name.
- One click routes package to pre-determined person/place within the organization.

Employee Lookup:

- With access to your employee location information, this quick access tool, provides up to date accurate information for routing.

Advanced tracking. Powerful results.

VueturaTrac™ Rich Client Software

Watches & Alerts:

- Handling instructions from buyers, managers, and other personnel on where to direct packages or to hold packages are now handled through an automatic watch system.
- Users are alerted of special instructions for a package based on the criteria set (tracking number, recipient, carrier, etc.).
- Global setting, thus regardless of the processing station, users are presented with the alert.

Template Designer:

- Easy to use template designer ensuring only the fields desired and tab order is displayed to the user. Multiple templates are easily accessed through the toolbar for immediate use. This creates an easy to use interface for the user to process guests/ employees quickly through the system.

Undeliverable – Mystery Mail Management:

- Great tool for managing vendor performance by quickly identifying issues related to delivery of goods at the dock.
- Also, utilized to ensure all packages are processed in the system to ensure proper chain of custody. Users can update progress on package research that leads up to final delivery or return to sender.

Return Authorization:

- Captures RMA information to ensure proper tracking as items are returned to vendors for credit.
- Detail is available for buyers, accounts payable, and other key end users to manage credits for their returned item(s).

Purchase Orders

- Simply capture PO numbers for receipts, or integrate using our VueLink tool for a full view of receipt details and automated routing to intended recipients.

Signature Capture:

Signature Pad

- Capture signatures of walk-up recipients to your dock or reception area.
- Ensures chain of custody when packages are provided to the recipient.

Pictures:

- Capture pictures of damaged items and link them to the package record for future review (perfect for claim filing).

Document Scanning:

- Scan packing list and other documents to reduce storage of paperwork.
- Electronic documents can be made available from WebTrac and can be emailed on demand as requested.

Email & Text Notification:

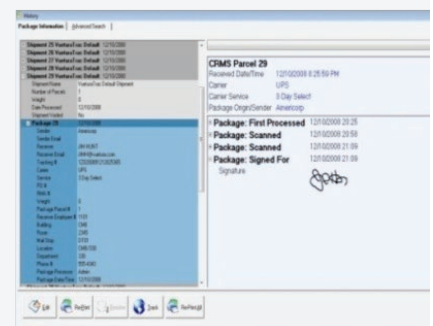

- Recipients can be automatically emailed upon the processing of their package.
- The email message is pre-configured and allows for unlimited templates to communicate the necessary information to your intended internal customer, providing information such as expected delivery time frames, details about the package, and links to the internal WebTrac page so they can follow the package status.

Additional email & text notification options:

- Security – suspicious packages.
- Hazardous Material – managing Material Safety Data Sheets (MSDS) or other protocols.
- Refrigerated Items – Calls to attention items that are time sensitive for delivery, thus managers or other key personnel are notified to ensure they are brought to their attention to ensure expeditious delivery.

History:

- Robust history screen, allowing for easy and quick look up on several key data fields.
- Provides full chain of custody view from dock to the delivery, displaying times, dates, users, signatures, and edits to the package record.
- Print or email details to end user for validation of delivery.

VueturaTrac™ Rich Client Software

Reports:

- Over 25 reports shipped with the product to provide measurable details on productivity, volumes, and service levels.
- Query Tool allows user to easily select criteria in order to create quick data results.

- Both the Reports and Query tools are all exportable to the various formats for additional data mining and review (Excel, Word, PDF, etc.).

Report Writer:

- Robust writing tool for creating your own reports that meet more specific reports that are unique to your business.

Smart Route:

- Create pre-defined routes which can be adjusted on the “fly” as needed to meet the daily requirements.

Package Distribution:

- Manage distribution lists by scrubbing outside lists against your internal list, minimizing re-work and misrouted packages.

Powerful results

VueturaTrac gives you complete control and detailed oversight of visitor and package tracking, process automation, and supply chain management.

What makes VueturaTrac so great?

🚀 Speed and Efficiency

With VueturaTrac manual processes become automated, streamlined, accurate, faster and much, much less costly.

👍 100% Visibility

With just a few clicks, you can find any package (and person?) in your facility and access its complete history.

📈 Rapid ROI

Customers report 400% or more three-year ROI, and the system frequently pays for itself in under a year.

⚙️ It seamlessly integrates with the big systems

VueturaTrac can integrate between one or more external host database systems or data warehouses.

About Vuetura

We are tracking experts with an intelligent, user-friendly framework built to give you complete control and detailed oversight of all tangible items within your organization— receiving & delivery tracking, lobby and visitor security, supply chain management and more.
